COMDTINST M4423.3

1 3 JUL 1995

COMMANDANT INSTRUCTION M4423.3

Subj: PROVISIONING MANUAL FOR MAJOR SYSTEMS ACQUISITIONS

- 1. PURPOSE. To implement Coast Guard (CG) policy and provide guidance to the provisioning process when used in a major system acquisition. This manual delineates procedures and responsibilities of the interfacing activities within the CG and the contractor. It is also intended to augment the Systems Acquisition Manual, COMDTINST M4150.2 (series). This manual is not intended for use below a major system acquisition. However, acquisitions not qualifying as major systems but still requiring initial Provisioning Technical Documentation (PTD) may use applicable sections of this manual when economically feasible. Usually, less than major systems acquisitions are provisioned per the sponsor's and appropriate provisioning activity's requirements.
- 2. <u>ACTION</u>. Commanders of maintenance and logistics commands, commanding officers of supply centers and chiefs of offices at Headquarters shall ensure compliance with this manual.
- 3. <u>DIRECTIVE AFFECTED</u>. COMDTINST M4423.2 is cancelled.

DISTRIBUTION - SDL No. 133 У я b С е g h i k р q Α 30 В * 1 ВO С D Ε F G н

NON-STANDARD DISTRIBUTION:

*B:c MLCs only (5)

COMDTINST M4423.3

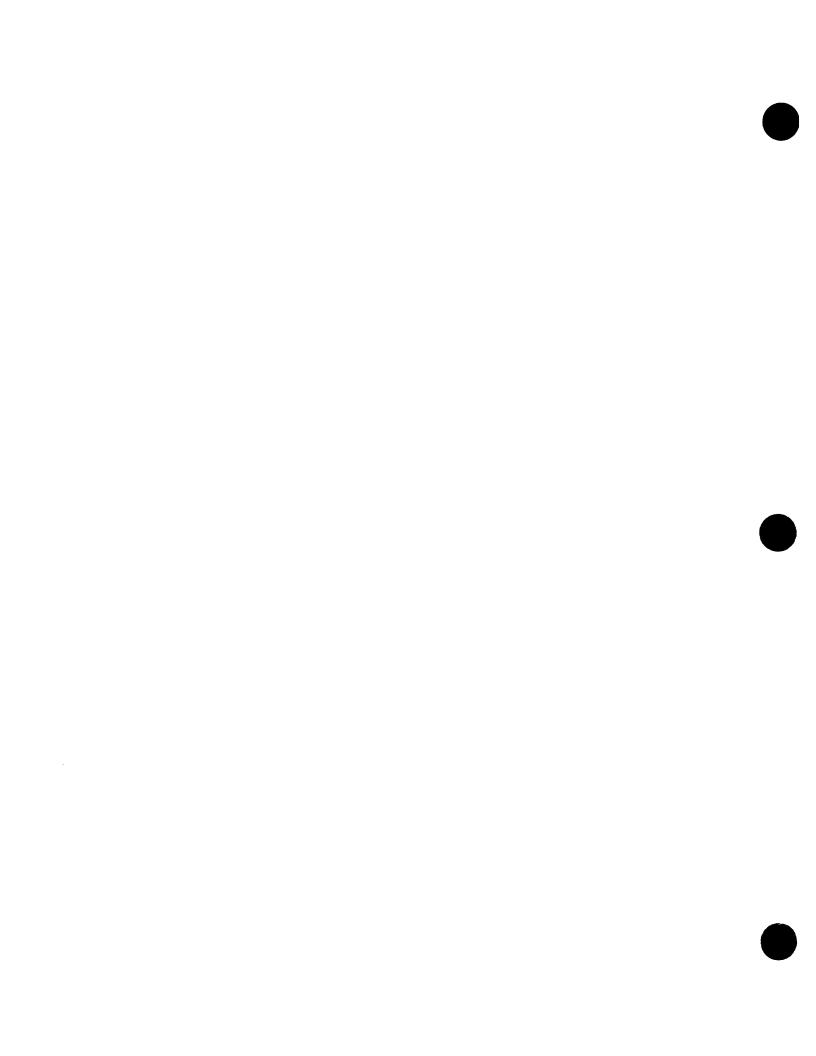

- 4. CHANGES. Changes to this manual will be consecutively numbered and will include reprinted pages when necessary. Comments (recommendations, additions, deletions) and other pertinent data for use in improving this manual shall be addressed to Commandant (G-ELM).
- 5. FORMS AVAILABILITY. Order forms identified for use in this manual in accordance with Catalog of Forms (COMDTINST M5213.6 (series)).

E. Ø. BARRETT

Chief, Office of Engineering, Legistics and Development

CHAPTER 1 - PROVISIONING

A. Overview. Provisioning is the process of identifying and determining the range and depth of piece parts required to support and maintain equipment. The objective is to ensure that replacement parts will be readily available to maintenance personnel when needed, either from the Federal Supply System (FSS) or directly from commercial sources. It is the cornerstone for establishing initial and life cycle supply support.

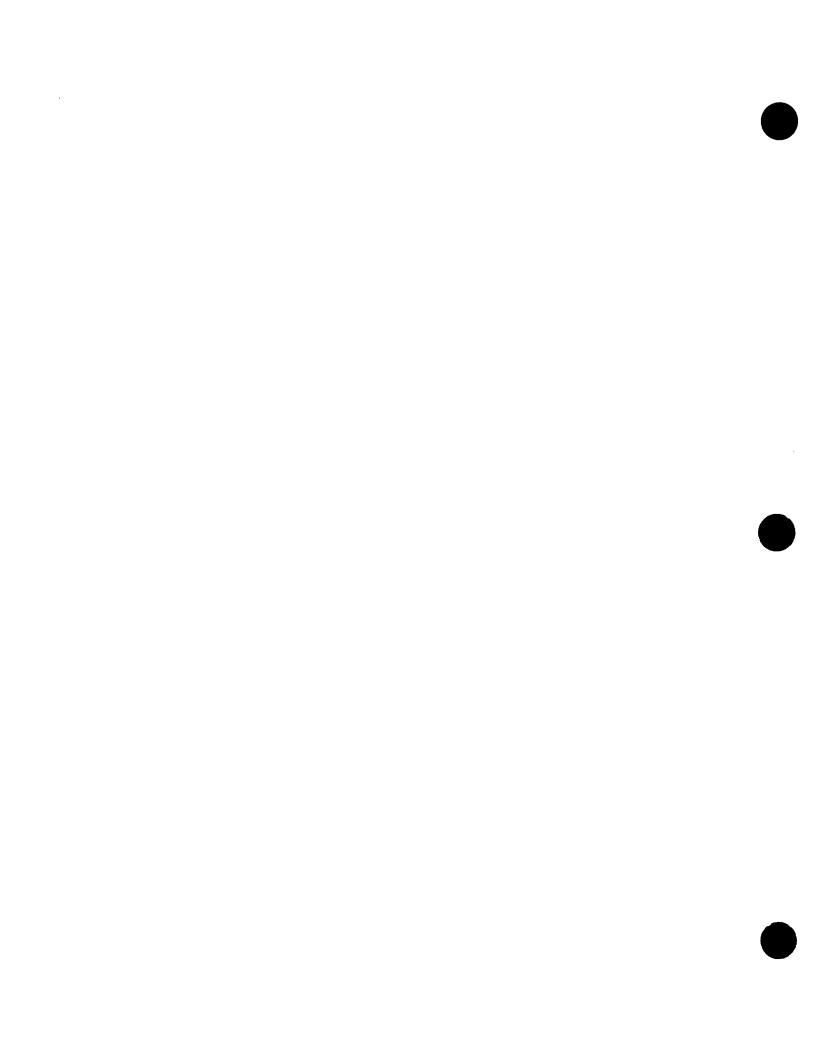

B. Reference Documents.

- 1. Systems Acquisition Manual, COMDTINST M4150.2 (series)
- Contract Data Requirements List (CDRL), DD Form 1423-1
- 3. Data Item Description (DID), DD Form 1664
- 4. Logistics Support Analysis (LSA), MIL-STD-1388-1A
- Logistics Support Analysis Record (LSAR), MIL-STD-1388-2B
- Coast Guard (CG) Provisioning Planning. Total Integrated Logistics Support (ILS) planning, as outlined in Chapter 4 of the Systems Acquisition Manual (SAM), must be addressed early in the acquisition process. In order to determine the supply support and provisioning requirements, other ILS considerations must also be addressed, such as:
 - Operational maintenance and support concepts to include Reliability, Availability and Maintainability (RAM),
 - 2. Maintenance and support outlines,
 - 3. Provisioning resource requirements,
 - 4. Maintenance training,
 - 5. Maintenance plans,
 - 6. Interim supply support requirements.
- D. <u>CG Provisioning Requirements</u>. As other ILS elements begin to solidify in the development of the Circular of Requirements (COR), Statement of Work (SOW) or Specification, the provisioning requirements are also developed. Provisioning requirements are various

lists and data elements that when completed allow identification, selection, initial requirements and cataloging of supply items to be procured through the provisioning process.

- 1. The various lists and data requirements are expressed as Provisioning Technical Documentation (PTD), they are:
 - a. The Logistics Support Analysis Record (LSAR) Data Requirements Form, DD Form 1949-3, (see enclosure (1) for an example). The general information and Part II, Section II addresses the provisioning and configuration lists and typical PTD data element requirements. Other Logistics Support Analysis (LSA) elements that may be required are not addressed here. All LSA data element definitions, including PTD, may be found in MIL-STD-1388-2B.
 - b. The Provisioning Technical Documentation Submission Schedule (PTDSS). The PTDSS outlines in a month/percent illustration the PTD submission progress schedule. (See enclosure (2) for an example.) The PTDSS also denotes certain afloat Hull, Mechanical and Electrical (HM&E) critical systems which must be submitted in ratio to the physical construction of the end item.
 - c. The Provisioning Performance Schedule (PPS). The PPS summarizes key provisioning events and milestones. The PPS identifies the end item, contractor, solicitation or contract number, conference dates and delivery dates for parts lists and other support deliverables. (See enclosure (3) for an example.)
- Engineering Data for Provisioning (EDFP), also a requirement, is the recorded technical information (e.g., manuals, drawings, specifications) of a scientific or technical nature that support the PTD.
- Provisioning requirements are documented in the solicitation/contract via the COR/SOW/Specification, Contract Data Requirements List (CDRL), DD Form 1423 and Data Item Description (DID), DD Form 1664.
- **E.** <u>Provisioning Policy</u>. Provisioning shall be accomplished for all new major system acquisitions requiring maintenance and operational supply support, except when:
 - 1. Technical documentation and supply support allowance determinations are in the possession of the

- government, the supply support parts are already available to the government and their continued availability is assured.
- The Project or appropriate support manager, for whatever reason, has determined that documentation and supply support are not required. This determination shall be in writing and placed on file.

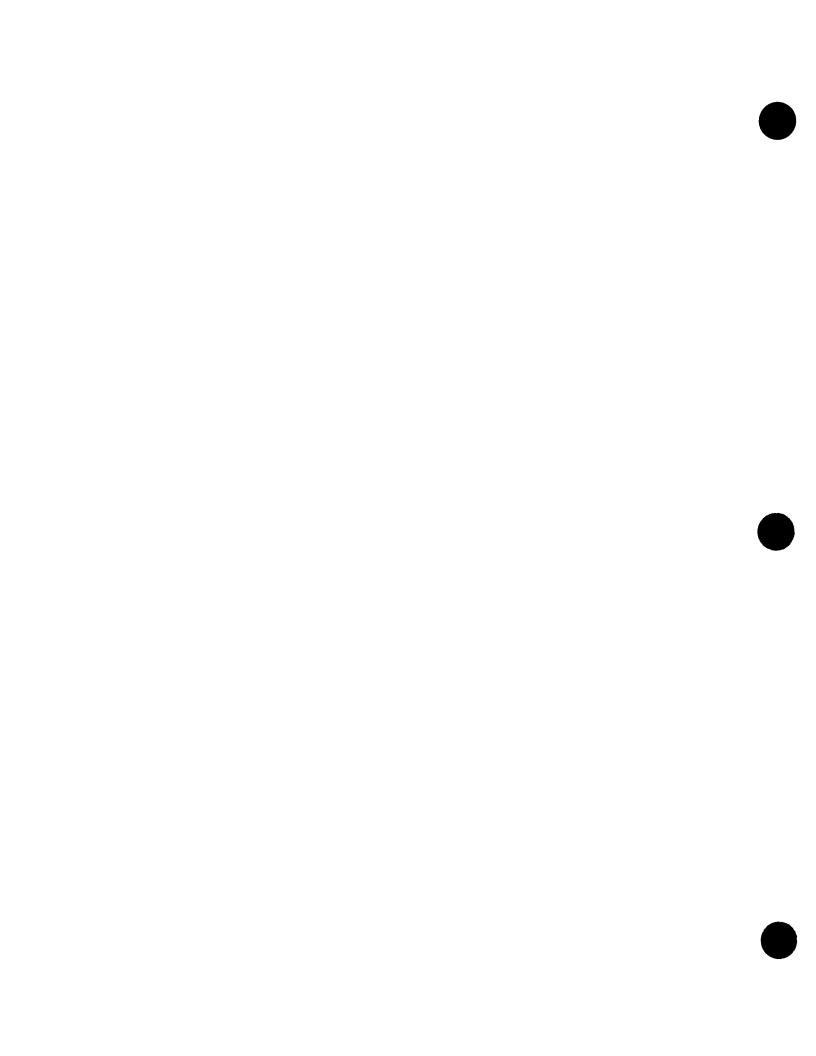

CHAPTER 2 - CG ACTIVITIES RESPONSIBILITIES

- A. <u>General</u>. All ILS functions and responsibilities required in the acquisition process are identified in Chapter 4 of the SAM. This chapter outlines the CG activities responsibilities in the provisioning process.
- B. <u>Project Manager (PM)</u>. The PM has overall responsibility of the project.
- C. <u>ILS Manager (ILSM)</u>. The ILSM is responsible for formulating, coordinating and implementing the ILS program, including the provisioning requirements for the PM. The ILSM shall:
 - 1. As chairperson of the Integrated Logistics Support Management Team (ILSMT), coordinate the provisioning process segment,
 - 2. Establish and monitor project reporting requirements,
- D. <u>Technical Support Managers (TSMs)</u>. Commandant (G-ENE), (G-TTE), (G-TES), (G-EAE) and/or other TSMs are responsible for developing technical data that relates to logistic support and the provisioning process. Support managers shall:
 - 1. Assist the ILSM in determining LSA requirements,
 - Develop maintenance requirements that include support and facility requirements, determine the level of repair and assign maintenance codes that reflect these decisions,
 - 3. Coordinate resource requirements with provisioning and maintenance activities for intermediate and depot level maintenance and supply support as required,
 - 4. Participate as a member of the ILSMT.
- E. <u>Logistics Policy Advisor (LPA)</u>. Commandant (G-ELM) is the LPA and is responsible for ensuring that provisioning policy is addressed and provides guidance. The LPA shall:
 - 1. Coordinate and maintain this manual,
 - 2. Participate as a member of the ILSMT,
 - Assist ILSM and TSMs in defining requirements for provisioning,

- 4. Designate applicable Supply Centers as provisioning activities and monitor their performance (Electronic and HM&E only).
- F. Provisioning Activities (PAs). PAs, Supply Centers for Electronic and HM&E and G-EAE for aviation acquisitions are responsible for receiving the various provisioning data from other activities and the contractor and for performing provisioning functions. PAs shall:
 - 1. Assist LPA and TSMs in defining LSA requirements when developing provisioning requirements,
 - Assist in preparing budgets and resource requirements (spare parts, personnel, facilities, etc.) for both initial provisioning and projected follow on support including depot level repair programs,
 - 3. Participate as a member of the ILSMT,
 - 4. Develop Interim Support Lead Allowance Parts Lists (ISLAPLs) as directed,
 - 5. Build initial outfit lists, as required,
 - Chair guidance and provisioning conferences, as required,
 - 7. Perform all provisioning functions required to:
 - a. Ensure equipment identification; assign Equipment Identification Code (EIC) as required,
 - b. Build a complete and accurate allowance document that reflects the approved support and maintenance philosophies, concept and plan,
 - Initiate new supply items into the FSS as required,
 - d. Initiate Interservice Support Agreements (ISAs) with Other Government Agency (OGA) Item Managers (IMs) for support of required items already managed in the FSS,
 - e. Initiate procurements for supply support of end items,
 - Inventory and/or stage supply support materiel as directed,
 - 9. Prepare progress status reports as directed,
 - 10. Fit-out platform/end items as required,

- 11. Interface with Project Resident Office (PRO) to enhance documentation flow, routine contract interpretations, contractor liaison, conference arrangements and other provisioning functions as required.
- G. <u>Project Resident Offices (PROs)</u>. PROs, if required, are responsible for ensuring that contractual provisioning obligations are achieved. PROs shall:
 - 1. Include personnel dedicated to this task,
 - 2. Establish a direct liaison with PAs,
 - Validate end items/systems/equipments/components before acceptance by CG to ensure the PTD submitted by contractor and actual installed systems/ equipments/components agree,
 - 4. Participate as a member of the ILSMT.
- H. Maintenance and Logistics Commands (MLCs). Commanders of MLCs are responsible for operational logistics support (Electronics and HM&E only). MLCs shall:
 - Under the TSMs guidance, develop maintenance support plans,
 - 2. Participate as a member of the ILSMT as required.

CHAPTER 3 - CONTRACTUAL REQUIREMENTS

A. <u>General</u>. This chapter outlines the contractual requirements recommended for the provisioning process.

B. <u>Contractor Requirements</u>.

- Development and Delivery. The contractor is responsible for developing and delivering the contractually required PTD and EDFP to the government. The PTD and EDFP requirements and delivery schedules are addressed in the COR/SOW/Specification, CDRLs, DIDs and this manual.
- Relationship of Documentation to Other Data. The PTD and EDFP developed and delivered by the contractor shall not be considered as satisfying any other contractual requirements. In preparation of this requirement, the contractor may use data being developed for other contractual requirements, e.g., reliability and maintenance analysis, etc. However, preparation and submission of provisioning data shall not be delayed pending development of other such data.
- 3. Vendors/Subcontractors. A contractor who buys the end item or a portion thereof from a vendor/ subcontractor shall impose upon their vendors/ subcontractors, not later than when the purchase orders are issued, all applicable procedures, terms, conditions and data requirements of this document. Inclusion of this requirement for such data on purchase orders to vendors/subcontractors does not relieve the contractor of the obligation to ensure delivery of PTD and EDFP.
 - a. Compliance. Contractors shall obtain from their vendors/subcontractors, in writing, confirmation that the vendors/subcontractors will comply with the data requirements levied upon them.
 Submittal time, format and content shall meet the CG approved PPS.
 - b. Letters of Refusal. Contractors shall obtain from their vendors/subcontractors, confirmation, in writing, when they do not intend to comply with the data requirements levied upon them. All letters of refusal from vendors/ subcontractors must clearly state the reason for refusal and prescribe an alternate method for furnishing adequate data to accomplish the provisioning process. The contractor shall furnish the PA a copy of each letter of refusal

after receipt from vendors/subcontractors. Vendors/subcontractors may provide the data required by this document directly to the government.

- c. Direct Vendor Contact. The CG, at its option and in coordination with the contractor, may contact the contractor's vendor/subcontractor directly for PTD requirements. The contractor will be notified and invited to participate. Throughout these contacts, any actions by the CG or the contractor will comply with the contractor's subcontracts and purchase orders for PTD.
- 4. Contractor Recommendations. Contractor recommendations, for both range and quantity of spare/repair parts, shall be in accordance with applicable CDRLs and DIDs.
- 5. Interim Supply Support. Contractor interim supply support, if required, will be addressed in the COR/SOW/Specification.
- C. <u>CG Obligations</u>. Subsequent to receipt of PTD by the CG, any item selected as a support item by the CG does not constitute a commitment or obligation on the part of the CG to order such selected items.

D. Detailed Requirements.

- 1. Conferences. Requirements for conferences will be specified in the COR/SOW/Specification, CDRLs, DIDs and this manual.
 - a. Purpose of Conferences. The purpose of conferences is to address contractors LSA guidance, PTD preparedness review, general guidance, interim support, long lead time procurement items and PTD.
 - b. Number of Conferences. A conference may be held at any time during the life of the contract for the purpose of resolving logistics problems.
- 2. Provisioning Methods. The government shall make provisioning decisions using one of three methods: Resident Provisioning Team, Conference Team or In House. Definitions of each method are outlined in MIL-STD-1388-1A.
- 3. Data Requirements.
 - a. Provisioning. The general information and

Section II of DD Form 1949-3 (see enclosure (1) for an example) shall be used to describe the provisioning lists and their required data elements, unless otherwise directed. A complete definition of each data element listed on DD Form 1949-3 may be found in MIL-STD-1388-2B. These requirements may be consolidated with other logistics data requirements when developing the COR/SOW/Specification.

- b. Performance. The PPS shall be used to describe events, set delivery schedules and monitor the performance of the provisioning process, unless otherwise directed.
- 4. Data Transfer. It is imperative that a transfer plan to move data from the contractor to the PA be developed. During the development of this plan, the government will provide details as to table structure and key elements. Additional details may be developed during the provisioning guidance conference.
 - a. All initial and supporting data or documentation required to be transferred shall be written in the English language.
 - b. The PAs may use the Personal Computer (PC) version of the Department of Defense (DOD) Interactive Computer Aided Provisioning System (ICAPS) to work the PTD data elements, and the PC version of the Real-Time Outfitting Management Information System Configuration Status Accounting (ROMIS CSA) to work the System Configuration Provisioning List (SCPL) and Provisioning Parts List (PPL).
 - c. The contractor shall be permitted wide latitude in choice of computer applications to gather provisioning, configuration and scheduling data. The ICAPS application, a DOD validated 1388-2B application, ROMIS CSA, most any relational database or any other application which will generate the necessary data files may be used. ICAPS and ROMIS CSA, if used, may be furnished by the government.
- 5. Statement of Prior Submission (SPS). SPS shall certify that the contractor has reasonable expectations that PTD and EDFP have been previously provided to a government activity that will satisfy the PTD requirements of this contract. Existence of an Allowance Parts Lists (APL) is not necessarily justification for submitting an SPS in lieu of PTD.

A SPS may apply to the end item or to any component The SPS must provide total identification of the subject item as well as the activity/agency, point of contact, telephone number and procurement document number under which the subject PTD was previously submitted. The SPS shall include a certification statement that certifies that all replacement parts are identical in every respect to those submitted under the original PTD submittal. If there is a difference, the certification shall identify the parts that are different. Appropriate documentation (PTD/EDFP) for the different parts shall be included with the SPS submittal. government reserves the right to reject a SPS if it does not meet the PTD, EDFP or SPS data requirements of this contract.

- 6. Incremental Submissions. When authorized by the LSAR data requirements DD Form 1949-3, PTD may be submitted in increments, provided that such increments comprise no less than the requirements of a complete component.
- 7. Provisioning Screening. Provisioning screening, if required, will be addressed in the COR/SOW/ Specification.

LSAR DATA REQUIREMENTS FORM DENERAL INFORMATION

Selection of a data element shall constitute the selection of all data keys or data dependencies required of document the element in the LSAR. Where more than one data element code applies to a data selection, the Code column contains dashes (-). For narrative data, where each data element definition is separately selectable to a common data table, the code column is blank.

This Form consists of two sections. The first section consists of government furnished data. The second section consists of the LSAR Data Requirements Form and is divided into three parts. Part I is LSAR provisioning data selected by an entry in the required column. Part II is LSAR provisioning data selected by an entry in the type of provisioning list. Part III is packaging data selected by an entry under a packing categorization.

Explanation of codes appearing under the KEY column are provided below:

GLOSSARY

DEFINITIONS

ALLOWANCE DOCUMENT. A technical and supply support document which describes an equipment/component and lists both the spare parts allowed in the operating units inventory to perform maintenance. It also lists other parts available from the Federal Supply System (FSS) for unplanned maintenance and unit level repair.

<u>CONTRACTOR</u>. The prime supplier of the end item and associated support items to the government under terms of a specific contract.

CONTRACT DATA REQUIREMENTS LIST (CDRL). DD Form 1423, CDRL, establishes requirements for schedules, identifies actions and delineates the specific procedural and deliverable data requirements applicable to a particular solicitation or contract.

<u>CUTTER SYSTEM FILE (CSF)</u>. The Coast Guard (CG) depository of all CG unique Hull, Mechanical and Electrical (HM&E) Allowance Parts Lists (APLs).

<u>DATA ITEM DESCRIPTION (DID)</u>. DD Form 1664, DID defines the data required on the Contract Data Requirements List (CDRL).

EQUIPMENT IDENTIFICATION CODE (EIC). A 13 character alpha/numeric code assigned by the Provisioning Activity (PA) to track equipment through the provisioning process. The EIC may become the permanent equipment identifier in the allowance and configuration document. The EIC presently is used in the Hull, Mechanical and Electrical (HM&E) Cutter System File (CSF).

FIT-OUT. The actual placing of the supply support allowances and outfit items within the operational platform. This includes the store rooms, operating spaces and habitable areas. This normally is performed by the Hull, Mechanical and Electrical (HM&E) and Electronic Provisioning Activities (PAs) only.

INTERIM SUPPORT LEAD ALLOWANCE PARTS LISTS (ISLAPL). A Coast Guard document furnished to the contractor for use in making up front initial supply support allowance determinations and cost estimates for interim supply support of the end item for a specific period of time. This includes both the operational unit and system stock inventories.

<u>OUTFIT LIST</u>. A document depicting specific categories of non installed equipments and support items that are mission essential, such as tools, test, safety and rescue equipment, galley, habitable and common support items.

<u>PROVISIONING ACTIVITY (PA)</u>. Organization, usually a Coast Guard (CG) activity, that assists in the development of the provisioning requirements and performs the provisioning process.

<u>PROVISIONING LISTS (PLs)</u>. Generic term that applies to all types of provisioning listings.
